Olon Industries is the leading North American supplier of profile-wrapped door, drawer and accessory mouldings to our customers who manufacture 5 piece doors for the kitchen, office, closet, healthcare and residential furniture markets. Olon offers manufactured moulding components with exacting quality, low order quantities and quick delivery.

Our natural strength and synergy stems from the internal manufacturing of our NEXGEN® wrapping grade laminates enabling us to keep a large variety of stock colours and different finishes always available.

# 5 Piece Door Components

## Product Offering

- The Olon product line offers a truly perfect synergy. Our components are profile wrapped in the same base materials and prints to perfectly match TFL and HPL materials that are used on exposed cabinet exteriors.
- Olon offers over 80 different styles of door profiles or you may design your own custom profiles. Our low minimum orders allow you to carry a wider variety of styles and colours.
- Olon offers a 2-week lead-time on our most popular styles and colours.
- We offer the largest available selection of over 220 stock colour and finish options.
- A complete accessory moulding program is available to perfectly complement your cabinetry. (Refer to Accessory Mouldings NEXGEN® Wrapped Profiles data sheet.)
- Our new LINK25 formable laminate in 4' x 9' sheets or continuous rolls is postformable for edges, tops or corners. Available in perfect colour matches to TFL and HPL, it is ideal for refacing or new installations and is recommended for vertical or light duty horizontal surfaces.

## Product Appearance

- The colours and finishes of NEXGEN® laminates make it nearly impossible to differentiate from real wood. NOW AVAILABLE - in 18 different finishes.
- Stile & rail construction with perpendicular grain direction perfectly resembles a wood door.
- Olon surface laminates allow for perfect colour matching and fade-resistance years after the original cabinetry is installed. Whether you want to add more cabinetry or simply replace a door, any new addition will be a perfect match to the original.

## Notable Features

- Olon 5 piece door components in NEXGEN® laminates offer a permanent antimicrobial surface with higher heat, scratch and stain resistance versus RTF (vinyl) and solid wood doors.
- There is no staining or finishing required, therefore saving time, labor and equipment costs. (Glazing or highlighting can be added.)
- Our tight manufacturing tolerances allow you to produce beautiful miters.
- We use only premium MDF for a better quality product. While solid wood profiles tend to warp and twist, MDF profiles remain straight. (MDF FSC®, NAUF, Fire Rated or Water resistant cores also available.)
- Zero formaldehyde emission may be achieved with assembled doors.
- KCMA certified. A lower capital investment is required to set up a manufacturing facility in comparison to other types of door production.
- Wrapped profiles are also available in vinyl, foil paper, polypropylene, 60 gram paper and many veneers.
